

Kaveh Moghimbeigi

Senior .Net developer / Technical Project Manager

Profile

I am from the generation that started off programming with Commodore 64 and ZX Spectrum 128. Today I primarily write code in C# and am a big fan of streamlining enterprise workflows using web and mobile technologies. As a Senior .Net Developer with a preference of backend development, I have extensive experience with .Net Core, Blazor, MAUI, RDBMS (SQL Server/Oracle/Postgres) and NoSQL databases (MongoDB/Redis/ElasticSearch/GraphQL/ArangoDB) as well as different Message brokers (RabbitMQ/MSMQ). I also know enough about Frontend and DevOps to fill the gap where my teammates are overwhelmed or just not available.

My professional journey began in 2003, and since then, I have worked on various platforms and technologies, including Windows Desktop, Web, Embedded systems, and Mobile games. My education as a full-fledged general engineer has equipped me with competencies that software engineers typically acquire later in their careers, such as Project Management, Quality Assurance (TQM, Six Sigma), and in-depth knowledge of traditional engineering and manufacturing (Toyota Production System-TPS, Lean). Additionally, I possess skills in Business Planning and Analysis, Entrepreneurship, and Strategic/General Management.

In recent years, my focus has shifted from game development to enterprise architecture, with a heavy emphasis on RDBMS and various NoSQL databases. I am well-versed in different software architecture styles (n-Tier, Onion, Clean, Hexagonal) and paradigms/approaches (EDA, DDD), as well as project management methodologies (Scrum, Agile, V-cycle, Waterfall).

I am passionate about mentoring younger colleagues, fostering a collaborative team environment, and helping official authorities (Team Lead, PM, Line Manager) meet team and business objectives. My soft skills include being a team player, demonstrating empathy, and effectively communicating with stakeholders.

Looking ahead, I aspire to evolve into a Project Architect role within the next 2-3 years, eager to take on more responsibilities and continue learning. My main fields of interest include ERP, enterprise applications, distributed systems on blockchain networks, mobile applications, IoT, e-Health, robotics, Big Data, Machine Learning, Logistics, rail transport and last but not least, game development.

Employment History

Senior Backend Developer, Parsis Co. (MCI.ir)

Apr 2021– Present Tehran, Iran

One of the services Parsis does as a renowned IT services provider is to provide big firms with developer talent they need. I was recruited by Parsis to work with a team of business analysts, developers and project managers to redesign and update some internal enterprise applications for Iran's most prominent mobile telecommunications operator, MCI (Hamrah-e-Aval).

We are working on 2 programs consisting of auditing payments (4 projects) and infrastructure utilization (2 projects including one with heavy IoT/Big Data architectural concerns). As MCI's main force of developers are contractors (like myself), it is important that the maintenance and small modifications to the system can be done by MCI's own staff who are at ease with SQL Server. So we needed to create an architecture in which SQL Server does all the heavy lifting and the front-end and APIs are as flexible as possible.

My main responsibility here is to design and develop the database and create stored procedures and functions to provide the needed functionality for the next layers. Recently I also create high-performance and secure REST APIs to be used by other teams within the organization. As the other senior programmer on the team, I also help our architect ensure code quality across the code base and help my junior colleagues whenever possible. I also design and develop data marts and warehouses for our Decision Support System and help creating dashboards for them using PowerBI. I have also started to use Machine Learning on our network data to better analyze current and estimate future usage and make suggestions for future expansion of company's network as well as for cost-saving. In another ongoing project, I am working on customer churn prediction using ML and Agent-based-Modelling (ABM). Recently I also support our PM (who is a line manager assuming the PM role and by her own request) with creating new project charters and integrating them into our existing and new programs.

Program Manager, Webhouse.ir

Jun 2020– Mar 2021 Tehran, Iran

Webhouse.ir is a prominent Web and Software company in Tehran, Iran. Their customers range from governmental agencies to some of the biggest Iranian private companies. The company is a partner of Kentico CMS and uses it extensively to deliver web applications of highest quality to its clients. My main responsibilities were:

- Setting up the company's PMO
- Creating and implementing the company's ALM integration strategy
- Training and consulting company's project managers on best practices
- Assuring projects' delivery across the company
- Managing numerous projects within programs
- Talent acquisition and training

The technology used was mainly ASP.net MVC/SQL Server/C#/HTML5/CSS/JavaScript/Bootstrap.

Senior .Net Developer, MedCover

Oct 2019 – Mar 2020 Tehran, Iran

MedCover was an innovative way of selling health insurance policies to households in Iran (A mobile-first SAAS to be precise). The project has been named Iranian InsureTech project of the year in November 2019. The project was on-hold since March 2020 due to risks induced to the business by Covid-19 pandemic and was ultimately cancelled in 2021.

The technology we used was ASP.net MVC/SQL Server/Angular/C#.

Lead Developer and CTO, HeartBoxGames

Sep 2015 – Sep 2018 Cannes Area, France

In HeartBoxGames and in 2 years, we have created more than 30 game concepts and around 10 of them are published either under our name or international publishers.

These games have been downloaded for more than 200k times (until September 2018).

The technology we use is mainly Unity 3D/C#.

Responsibilities:

As Lead Developer (70% work load)

Ensuring the use of best software practices across all our projects

General and game Programming + Writing automated tests

Pair Programming and Code reviews

As CTO (15% work load)

Designing the Enterprise Architecture

Choice of stack of technologies for the company (Backend/Frontend/DevOps)

Mentoring apprentices and junior developers

Preparing and packaging finished code as reusable modules

Creating Company's technical roadmap

Choice and implementation of KPIs and Analytics tools

CI/CD pipeline

Implementing continuous improvement

Implementation of Lean Enterprise and Scrum + Kanban methodology

Recruitment interviews

As Project Manager / Product owner (15% work load)

Project Management (1-2 teams of 3 to 6 for more than 20 projects)

Product Management (+10 projects)

Senior Developer/Technical Project Manager, Pars Kaghak Rayaneh

2009 – 2010 Tehran, Iran

Leading a small team of junior engineers in delivering a high quality product from scratch. While juggling with developer/PM roles I still benefited from my more senior colleagues' knowledge on technical challenges.

Responsibilities:

Requirement analysis, Negotiation with clients, Lead developer on the project

Project and team management, Delivery of the final product, Technical support

Chief Technical Officer, Pooyesh Gostaran Tarabar

2007 – 2010

Tehran, Iran

Pooyesh Gostaran Tarabar was a sister company to Pars Kaghak Rayaneh. It used to market and implement fleet tracking services based on INMARSAT D+/C when cellular network was not that reliable and smartphones didn't exist. Our clients were some of the biggest carriers and forwarders in Iran and central Asia.

Responsibilities:

National and international negotiations with clients and sources

Requirements Analysis

Creating a total solution for fleet management

Programmer, Pars Kaghak Rayaneh

2003 – 2008

Tehran, Iran

Starting as a junior QA technician, I soon evolved into creating unit tests and a bit later, with the adaptation of TDD in PKR, became programmer. Being at ease with electronics, I also worked on projects dealing with interfacing legacy systems with newer services as well as creating monitoring interfaces (for example an electronic dashboard to check our servers' health and sending SMS notifications if something went wrong). This era was when the cornerstone of my programming career was laid as I had the opportunity to work closely with some of the brightest minds in the business.

Education

Ecole Nationale Supérieure d'Arts et Métiers (ENSAM), Engineering Diploma

2013 – 2016

Paris, France

General Engineering in France tends to form multi-disciplinary engineers with not only deep understanding in many engineering fields (Mechanical, Industrial, Materials, Electrical and IT to name a few), but also managers and leaders able to coordinate, supervise and lead experts in different domains in order to achieve the intended goal. There are very few establishments in France who are permitted to issue this degree and they are very selective. This type of diploma is very highly regarded in France and is internationally recognized as equivalent to Master's degree.

Université Lille 1, Master 1 - Automatique et Systèmes Electrique

2012 – 2013

Villeneuve d'Ascq, France

Having chosen Controls and Electrical systems for my master's degree, I ended up 2nd in overall ranking.

Université Lille 1, Bachelor of Engineering - Electrical Engineering

2010 – 2012

Villeneuve d'Ascq, France

Back to school, I started studying electrical engineering in France and in French. The first part of these studies was a reminder of what I have learned back in Iran. But this time, I knew the importance of hard work and concentration. Although my colleagues were on average 10 years younger than me, I finished in the top 5 of our faculty.

Islamic Azad University, Associates degree - Electrical Engineering (Telecommunications)

1997 – 2002

Shahr-e-Rey, Iran
